

Child Safety Information

Cord Safety Warning to Installers and End-Users:

Basic cord safety

Children and window cords don't mix. When window cords are accessible to small children, these seemingly harmless products may become strangulation hazards. A child can place their head in the loop created by the blind or shade cords. If the child then tries to sit or falls down, they can hang themselves in the loop. To avoid strangulation and entanglement, keep all cords out of the reach of children by installing safety devices that limit access to the cord and/or chain.

Move all cribs, beds, furniture, and toys away from windows and window cords, preferably to another wall.

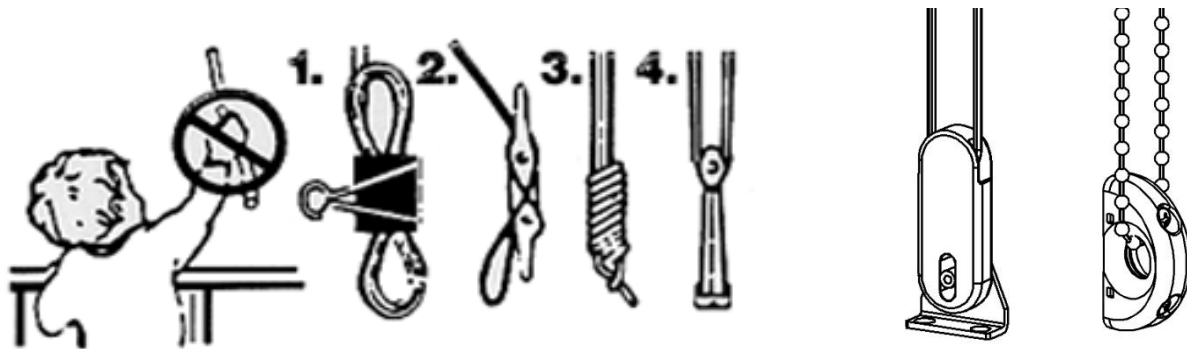

Keep all window pull cords and inner lift cords out of the reach of children. Make sure that tasseled pull cords are short and continuous loop cords are permanently anchored to the floor or wall. Make sure cord stops are properly installed and adjusted to limit movement of inner lift cords.

Lock cords into position whenever blinds or shades are lowered, including when they come to rest on a windowsill.

To avoid possible strangulation, keep cords out of the reach of children with the use of the cord safety cleats or other cord safety clips that are provided with each blind or shade.
